

2022 INTERNATIONAL CATALOGUE

"Continuous enjoyment" I want to be a manufacturer that provides it.

As the world becomes increasingly uneasy from the threat of the Covid-19 virus,

I think many people have seen a ray of light in outdoor leisure, in particular fishing.

through the wonderful experience of fishing, as we at Jackson work towards providing as many people as possible with the joy of living, through fishing and being outdoors.

Our job will continue in an uneasy world,

I will continue to work with my team at Jackson,
as I sincerely wish to share and grow the feeling of "Continuous enjoyment"
through uncertain times and through Jackson products to
many people around the world.

MTX-908M

A model that combines finesse and power to operate jigs from 30g to 80g lightly. As for the plug, the allowable range that can cast is up to 60g. Since the length is shorter than other models, the weight has been reduced as its been developed as a model that puts less strain on the body when using jigs and plugs. It is rod that can be recommended as an entry model for full-scale shore jigging and as a sub rod when using lightweight lurgs other than metal jigs.

MTX-1000MH

A standard shore jigging model developed for operating jigs from 60g to 100g. As for the plug, the recommended range that can cast is up to 80g. It is a model that pursues flight distance and operability, aiming for the next higher standard. The blanks are both strong and flexible and can be used for large fish that come unexpectedly, allowing the angler to fully enjoy shore jigging.

MTX-1006H

A shore jigging power model developed to operate jigs from 60g to 120g. As for the plug, the recommended range that can cast up to 100g. It has ultra-long throw performance that makes the best use of its full length, and can fight well against Nabla, which is not capable until now. The butt power is also the strongest in the series, and it is equipped with blanks that are suitable to large blue-back fished. From the tip to the butt, it has flexibility, but still manages the ability to retrieve diving pencils with amazing results.

02- Salt -

The long-awaited full renewal of "Ocean Gate Seabass", which pursues the basics of seabass games to the utmost limit while being reasonably priced.

Urban rivers, harbors, surf and estuaries. A cast that is repeated with dozens of throws under all circumstances such as the flow, twist, and terrain change that you feel when retrieving the lure which will then lead to the next throw, and the angler will accumulate the information obtained from the field while repeating this casting. Ocean Gate Seabass uses medium elastic blanks so anyone can smoothly repeat the basic "casting" in the seabass game that make it easy to use the weight of the lure when casting. We have a lineup of three main models to support various scenarios. Please experience "Ocean Gate Seabass" which pursues the basics of seabass game while being priced reasonably.

CEAN GATE Super Light Jigging 2022 NEW Grunt Snapper Rock fish Migrant fish

Super light jigging that anyone can easily begin

Super light jigging uses a lightweight jigs, so anyone can easily fish them, and it is a familiar genre that you can enjoy at any time, aiming for grunt, root fish, small green fish, red sea bream, etc. throughout the year. And the real pleasure of this fishing is that the fishing results change depending on the action of the jig. We adopted the glass tip that you can change the action of the jig at any time and automatically produce the hook up.

Jigging has become more detailed these days and the boundaries of tackle have become clearer, and the evolution of tackle has accelerated, making it possible to target a wide range of fishes even with lighter tackle. This Ocean Gate Light Jigging series has been developed to pursue the current standard and is able to fish the latest light jigging methods. The blank materials are of quality that exceeds the class, and raise the level of accuracy and torque. The action has a bare taper so that you can handle the jig at will.

JOG-900ML-K SeaBass

A model mainly for harbors and medium-sized river areas that is easy to handle and operate minnows and shinpen lightly, and it also supports delicate temptation such as small vibrations and worming techniques. It is a model that can support a wide range from standard to technical supports.

JOG-906ML-K SeaBass

A model developed for scenarios where long-distance casting performance is important, such as large rivers and wading on tidal flats. Uses medium elastic blanks that allow you to feel changes in water flow at the point where you cast a shinpen or minnow long distances.

JOG-906M-K SeaBass

Adopted regular fast action blanks so that you can handle large plugs and high-density vibration without stress with the butt power designed to withstand the forcible pull of larger class fish. It is a model that can handle not only sea bass but also shore jigging on surf and embankments at a high level of performance.

Super Light Jigging

JOG-S64UL-K SLJ

A super light jigging rod with the finesses to lightly operate jigs up to 60g and the butt power to lift even small Blue-backed fish. By adopting a glass tip, you can catch fish like grunt with its finesse design. The delicate tip allows the angler to hook up on the fall bite and leads the angler into a new fishing result.

JOG-S66L-K SLJ

A super light jigging rod with the delicate action to lightly operate jigs up to 80g and the butt power to lift even small Blue-backed fish. By adopting a glass tip, you can catch fished like grunt with its finesse design. The slightly longer length creates a large stroke when hooking, and assists in hooking those fish with a hard upper jaw such as red sea

Light Jigging

JOG-B63ML LJ

With a bare taper that allows you to operate jigs up to 150g at will, it can handle a wide range of jigs and actions to deal from hairtails to blue-backed fish and is the standard model for inshore light jigging and also supports hairtails up to No. 40.

JOG-B63M LJ

A strong inshore model that firmly conveys the action to the jig even in situations when fishing deeper water and faster tidal flow with a bare taper that operates jigs up to 180g at will and also supports hairtails up to No. 50.

2022 OCEAN GATE NEW — TAKO—

Fusion of toughness and delicacy. From Ocean Gate series, Octopus begins

"Octopus" has been established as a target that can be enjoyed widely from boats and shore-based fishing. At first glance, this fishing feels exciting, but it is highly game-friendly, delicate, and deep, such as how to lift it so that it does not stick to the octopus after hugging it with a temptation. When fishing for octopus, there needs to be a balance of finesse and power to tempt, then land the Octopus. The tip has two models, glass solid and a slightly tubular tip which make it possible to hold the octopus deeply without feeling any discomfort. It also has butt power that lift the hooked octopus with torque produced by thickly wound low elasticity carbon. Experience the Ocean Gate Tako, a fusion of toughness and finesse.

[SPECIFICATION]

| MODEL | Length (cm / ft) | Power | Lure Weight | Line | Action | Self Weight | Collapsed Size | Piece | Tip Diameter | Carbon Fiber | Other Materials | Price |

| JOG-B700H TAKO | 213cm / 7ft | Heavy | MAX60号 | | Fast | | | 2 | | | | ¥15,500 |

JOG-B600XH TAKO

A model with a glass solid tip. Because it uses a glass tip, the octopus rides very well, and it has the power to lift the octopus from the rod tip to the butt. From vertical to cast, weight setting up to No. 80 covers a wide range of fields with tidal currents and deep water. Not only for octopus, but also for fishing in Tenya.

JOG-B700H TAK

Multi-tubular model. This model, which combines sharpness and torque, specializes in tempting octopuses such as shakes and small thrusts, and it is possible to tempt octopuses at the angler's will. It is also good at search fishing in a wide area by casting and can easily perform a series of actions such as "throwing, tempting, hanging, and taking". Its width of use is wide from ships to breakwaters, making it a vesselle model that can be used in our field.

U4 — SALT

Grip design has both design and functionality.

Titanium torzite ring by Fuji. (JSC-62IIIXH adopts SiC-S guide

Made from original material to provde power and increase

This rod has been designed in collaboration with an experienced captain of a popular sea bass boat at Tokyo bay. Based on the tour guides experince we pursued the rod which anglers need now.

Our conclusion was the "Ability to accommodate", and a build a rod which can adopt to varying circumstances where there is constant change and anglers can then still fish with enjoyment and ease. So the "JESTER" was born.

Improving on the basic performance features, it has flexibility which anglers can feel and enjoy through the chrome blank which can adopt many situations, showing versatility at all times. Fitted with TORZITE rings by Fuji for ultimate perfromance and blank suitability. Without compromise, we proudly introduce JESTER.

JSS-701XMH-SP

Based on the concept of better operability than shiira rods and stronger than boat sea bass rods, it can be used for mid-sized blue fish, shiira, bonito and high-weight lures. The blank has inherited the suspension performance(SP system) of JSS-610M-SP. With this benefit, forcible landings have been made possible even for low-freedom Sawara Casting ships. The guide spacings have been set so that you can cast the leader without stress and the thick lines that required for Sea Bass fishing. It is a new-generation power spinning rod thats high level of operability is unchanged by how much power this rod has.

JSC-66TL-P+

A baitcasting rod designed specially for flipping cast. The blank design allows for extremely accurate pin point casting with variety of lure weights include light weight tackle. Its construction and design make it very sensitive but powerful enough to strike and fight sea bass. This rod gives the angler sensitivity, accuracy and power all in the one rod.

JSS-610M-SP

This is an all rounder for sea bass fishing, and one of the greatest features is its rear parts. The suspension system in the rear section enables the angler to react to fish bites immediately. This system also allows anglers to enjoy the fishing with larger lunker sea bass, blue fish and flat fish, Its smooth sensitive tip allows fish to strike and increase hook up rates. Maximum lure weight is 35g, and can handle wide range of weights and types of lures. Its blank is Jackson' original design, which is a combination of a powerful action and elastic function. This rod allows anglers to cast both with pin point accuracy and with distance when needed.

JSS-611MH

Adopting MH power, which is between JSS-610M-SP and JSS-701XMH-SP, it is set to an action that makes The taper curves differently from the SP system and advatntage to the fish.

JSS-705XMH+ LC

A long cast model specializing in fluttering. A a design that is balanced between maximum casting distance and power to stop the fish during the fight. It is the rod that can be used when you need a cast distance with a charter boat, for species such as feeding Spanish mackerel, selective cutlet onabra or, big bait spinning of sea bass.

JSC-62IIIXH

The long-awaited big bait model is here! Mr. Ikegami asked for a rod that can continue to perform actions with big pencils. It is a torqueful blank that has a focus on power being short and stiff to gain control. Furthermore, by installing a carbon separate fat grip. the frictional resistance between the grip and the wear is reduced, enabling longer use without any stress or wear

STSLS-9062L+ Less is more

A simple rod packed with features that will give the angler unity with the fish. SLS fishing which means SUPER LIGHT SHORE jigging is growing in popularity and is the use of small metal jigs fished from the shore, be that ricks or beaches. Although the main lure of choice is small metal jigs up too 15gms becoming popular are also minnows, sinking pencils and jig heads with worms. the cast and with a stiffer tip section and 40t carbon blank this vrable and gives the angler so many opportunities from the surf to

2 Flexible and sensitive

A surf rod series released and designed by Jackson in Shizuoka, the sacred

widespread support from beginners to experienced anglers as it has

STHS-1062M The all-rounder

Models that correspond to fishing with high gravity lures such as heavyweight plugs and metal jigs that became standard at the moment. At 10.6ft length, which is the standard length for surf fishing, it is possible to fish with good handling that is not too long and not too short. A well-balanced taper design and 40t material worming with a jig head under severe circumstances, 12 to 14cm minnows, and a metal jig up to 45g. correspond widely to the lure required for surf fishing. It is an all-rounder that covers all of surf fishing.

Models that correspond to situations such as high-waves, widely shallow fields, and strong winds and other circumstances where you need to cast a far distance. It has high elasticity and it is made from powerful materia up to 60g of metal jig is not limited to flat fish of far superficial surf, but also sea bass before overwintering and large blue runners such as Spanish mackerel are targeted. The balanced design never takes away from the angler's ability to concentrate with sensitivity to forget the length of 11ft. This is the one to conquer surf fishing

A finesse model for surf fishing corresponding to fish that do not use their mouths, such as fish that have been injured due to environmental changes such as stormy weather and a sudden drop in water soft, it becomes a negative factor for casting distance. Material with moderate stickiness and repulsion is applied to the model. It changes its repulsion force even if it is lightweight itself and it can cast far. This material, plus its casting distance guarantee that you will not miss a bite. The solid tip seems to be delicate at the first glance, but it is great with respect to sucking bites.

around the hard jawbone while leaving a lure in the biting mouth. The belly of the damper role that protects $\frac{1}{2}$ the thin PE line continues to give pressure to the target, while absorbing shocks. It goes without saying that the butt has enough power to respond to flounder.

The tubular tip is not only capable of worming but is also excellent in operability with iron vibrations and metal jigs up to 20g and it has a flounder aim when chasing small baits. Surf FINNESSE fishing onding to micro jigging for blue runners to the extreme model.

OCEAN GATE

— Shore Jig —

For everyone enjoys the intense and dynamic shore jigging. Blueback fishes can be said the main target in salt water fishing now. Everyone are excited and addicted the strong tug and the boil like the sea is boiling. It is the orthodox rod that everyone can enjoy the easily such a dynamic fishing. 24t carbon is excellent in persistence compared to 30t and 40t, and its moderate tension enable everyone to cast easily, ideal material for a jig rod. This is wound up using the original taper design that Jackson has developed, and is finished as a high balance design with strong and reducing heavy holding feeling.

K guide frames by Fuji are equipped. The use of PE line is safer due to alconite adpoted for the ring.

JOG-906ML-K SJ

A model best suited as an entry model of shore jigging. The length of the rod makes it easy to handle, and it is ideal for jig casting from a levee. It is recommended for anglers who develop game around 30 g of metal jig.

JOG-1000MH-K SJ

A suitable rod for fishing in vast fields such as surf fishing. A long rod which corresponds to the cast of a large plug such as a diving pencil, as well as to cast a jig of 20 to 80 g at great distances. It is also suitable for fields where large blue rupners can be found.

J0G-908M-K SJ

At an exquisite length of 9.8 ft. it is easy to operate while securing long range performance and cast covers from levee to surf. It corresponds to major weights in shore jigging for a metal jig. It is 20 to 60 s and it is a standard model for predium size blue rupes.

J0G-1006H-K SJ

A heavy power model that corresponds to circumstances where you can not compete with a light jig like strong wind surf, quick tide at rocky shores and deep shores. It handles jigs up to 100g, and has the power to challenge monster hunts aiming at bonito, large dorado, etc. This is the one which can be a subordinate rod for skilled anglers.

- SAGOSHI -

Developed with a desire to supply a special rod suitable for Sagoshi for beginners after understanding the predation characteristics of Sagoshi. Its predation method is different from sea bass and blue runner, it is not a predation which inhales bait, it likes to bite its prey first, the sharp teeth bruise baitfish, then they chase the weakened ones. This is why the rod must have a sensitive tip section to feel these bites as they are not as strong as seabass and others.

TROUT

Offshore Casting

The appearance of the long-awaited offshore casting model of the OG series!

You can enjoy fighting large migratory fish using the light and sensitive blanks without losing power.

Even OG offshore casting series is offered at low price, it incorporating all the elements required for casting games that are becoming more popular year by year. The blanks are low-elasticity carbon to accommodate larger pelagic species and maximizes stickiness and torque. The guides are Fuji-made K guide frames to improve long casting and ease of operability. The grip shape is designed to increase the ease of casting and the holding power during fighting.

JOG-700L-K LC

baits. Its semi soft tip allows the rod to load up evenly on the strike and set the hook without pulling the hooks when using high speed retrieves and can handle easily fish up to 10kg in weight. This is a perfect rod for Spanish Mackerel fishing that is becoming very popular and its value for money makes this rod available to so many anglers to enjoy. The action of this rod will have you casting and retrieving many lures types and staying connected to your catch and become a very reliable part of your fishing equipme

JOG-702L-K OC

A medium power model for boat casting built mainly for casting in the inshore and offshore areas. From top games of dolphin fish and amberjack with the use of metal jigs, from a wide variety of actions to solid hook ups and fighting the fish its designed in such a way that you can enjoy it without putting a burden on your body. The blanks are excellent in manoeuvrability and castability, and the blanks can be used with peace of mind even in the 10kg class fishing. In addition, it is equipped with a guide ring with a calibre that has a sufficient margin to reduce line entanglement when using a thicker leader material, and it is a model that allows you to fully enjoy tough and stress-free game fishing.

A medium power model for boat casting and offshore area casting. From the top game of Shiira and Hiramasa using metal Jigs, this rod is one that can be enjoyed without placing a burden on the body and is easy to use from casting to hooking and then the fight. Blanks used are designed to fish safely with 10kg-class blue water species and are the perfect length for castability, but remain user friendly as well. Designed for boat and offshore fishing in mind and made to keep maximum flight distance from the elasticity of the rod from the butt section to the tip. Also equipped with a aliber guide ring with a sufficient margin to reduce line entanglement when using thick leaders. It is a model that allows you to fully enjoy tough & stress-free game fishing.

OCEAN GATE

Lightgame Mix -

Fully complete the light game! LG MIX (light game mix) debut from the Ocean Gate series

A light game style of fishing that has been booming in recent years.

Even though it is a light game, there are various target fish that cannot be grouped together under the nightlight, fishing ports, rivers, etc.

When fishing, you may encounter many target fish such as horse mackerel and rockfish, plating and barracuda, black sea bream and sea bass, rock fish, and sometimes squid. At that time, we feel that there are many anglers who have missed many opportunities, such as "If you can throw this lure, you can catch it ..., you can not throw this lure weight with this rod ..." I will. Based on the voice of such anglers, we started the development of LG MIX (light game mix). First of all, we designed a rod for caro and float rig that can be easily handled in the middle of 7 feet and can explore a wide range. Based on that, add power from tip to the rod butt and we have succeeded in giving the angler a width of lure weight usage that could not be achieved with normal long length aging and mevalling rods. Please experience the Jackson-style LG MIX (light game mix), which is is focused on light games.

JOG-74L-K ST LGMX ISOLID TIP MODEL

A short solid model that specializes in vertical retrieving style actions such as caro, metal jig, wind, light Texas and free rig from the jig head alone in the latter half of 1g. By installing a short solid section in the tip the shake is controlled and amazing operability is realized. The it also plays a role in operations such as twitching and sharp yet responsive reaction to the bite maximizes

It is also a good model for jerking retrieves with bottom game fishing for of Chinu and Egi of No. 2.5 to

JOG-76L-K LGMX

as plucking, as well as caro and metal iigs, from a single iig head in the middle of 1g. Although it is a fast taper that emphasizes operability

jerk retrieving by giving the tip a slight swing width. the situation. It is a model suitable for top games of Chinu and light egging of No. 1.5 to No. 2.5 class.

The use of PE line is safer due to

OCEAN GATE

MEBARU -

Reborned for rock fish anglers

The Ocean Gate Mebaru series, is one step ahead of the standard in Mebaru that is now evolving day by day. The action required by the angler, which was revealed by repeated the field testing, was closely studied and put into the design. By dividing the series between the Aji model and the Mebaru model, we have prepared a line up that meets the demands of anglers while maintaining cost performance.

K guide frames by Fuii are equipped. The use of PE

JOG-72UL-K ST MB SOLID TIP MODEL

This model has high hooking rate due to its sensitive performance currents and strikes through the rod tip, allowing anglers to detect the slightest of strike or movement.

JOG-76L-K ST MB BOLID TIP MODEL

With a length of 7.6ft its perfect for fishing sea walls from the shore, It has a sensitive solid tip which can handle wide range of lure weights, making it a versatile choice.

JOG-76L-K MB

Built with a hollow structure with great versatility, it can be use with a single jig head, plug, micro jig and heavier lures for floating rigs. Its powerful and balance give versatility and give the angler options for different situations and is capable of large rock fish.

[SPECIFICATION

The 8ft4in rockfish game, despite the length has an overall excellent balance and has become a standard model that anyone can handle with ease

However this rod is far from just a standard model. A rod design that's in pursuit of the "sensitive operation," "sensitivity," and "breaking in" that are all important features of the rock fish game. The angler needs to be conscious of the bottom and the answer is derived from the hard solid tip. In this genre, the hard solid tips are rarely used but the solid tip in this rod can be felt immediately through its performance. Winding fishing using Daniel's head lock is always many kinds of terrain with this rod. RTS-804H-MHST is a new purpose designed concept rod

RTC-808XH

Power bait casting model. This is a pole-friendly model designed to capture impregnable rockfish that live in complex sharp structure and cliff like elevations which typically cant be fished with the normal rods and leader combinations, this rod enable access to such areas and fishing styles. This is a variable fast taper bait casting model that makes the best use of the characteristics of bait tackles and can be used with ultra-long leaders even with a micro guide design, and is combined with 40t carbon and 30t carbon. It can be used with jig heads and sinkers of 40g or more, which enables the angler to fish in rapid water areas and water depths of 25m or more, while still being able to convey the delicate and solid operation feeling to anglers needed for this style of fishing.

After hooking, the rod is designed so that the power point moves to the butt of the rod giving the user a strong lifting force which enhances the combat power for the angler

A new style proposed by Jackson, the "Technical Rockshore Model

A delicate feel which is capable of a variety of actions that could not be done with as much ease using the conventional shore jigging rods. As its name suggests, it is a model specializing in technical shore casting games, and is an ultimate weapon on the offshore rocks and offshore itself for the purpose of crossing over with a large grouper as well as other unexpected large fish. eaters.The sensitive multi-point micro guide system provides less play of the line through the guides, giving the angler increased sensitivity and increased line durability that can be obtained by finely distributing the load allowing the angler to have an increased load by the 2-point guide design to the butt piece, unlike conventional shore jigging rods. Based on this, the amazing mechanisms that enable a balanced design are incorporated to handle jigs of 80g or more surprisingly easily with sensitivity due to the design and balance of the HHS-810XH power UP model.

In addition, by combining carbon materials with different numbers of tonnage with blanks in a unique ratio, gives the angler a higher level of lure performance from casting through to fighting. Many design

HIDEOUT HUNTER

*The image is reference only. The repulsive force of rods are not expressed, actual feeling at a fight with fish may be different

The basic usage of metal jig is roughly divided into "just winding" and or "jerking". Of these, "stayfall" was developed with a focus on the "jerking" style retrieve. There are various methods of "jerking", but the one I use most often and produce the fishing results is "Kurohyou jerk". Jerk 3 times (wind the reel 3 times) and fall, then jerk 3 times and fall, and repeat. It is a method to make the fish show interest with each jerk and eat it when dropped. It seems easy in words, but when entering the fall operation, the rod tip is lowered for a moment and the line slack is intentionally put out. By doing so, you can make the most of the original movement of the metal jig and bringing on the bite.

And because of repeated research, we have completed a metal jig that can stay in the water and produce an "Interval to feed" without the action of putting out line slack! It was not suitable to make

an "Interval to feed" with a thin silhouette of a general anchovy profile because the water drains quickly. However, in this "Stay Fall", a dent is provided on the side of the jig so that it can move easily by the shapes resistance to water flow, making it possible to stay in the water for those crucial bite moments. If you just stay in the water and fall, the body will not move and and hence the lure will not flash, so it lacks appeal. Therefore, by smoothing the edge of the dent on only one side, we created an opportunity for water to escape. As a result, flashing occurs while the lure shimmy's and falls, and it falls like a leaf.

By balancing the center of gravity slightly closer to the rear, then the center, you can secure a flight distance and cast without resistance. If the center of gravity is closer to the rear side, you may think that it will not be a horizontal fall, but this also enables a horizontal fall by receiving water in the entire recess of the lure body.

Eight colors carefully selected by the Kurohyou (Ikuma) are available, from the selection of holographic to the color arrangement.

Please experience the ability of "Stay Fall" that can maximize the "Interval to feed" that is effective not only for "Kurohyou jerk" but also for various jerking styles of fishing.

The metal effect Stay fall creates a vertical fishing-conscious bite, and this metal effect Blade was developed with a focus on horizontal fishing that is conscious of winding fishing. For Stay fall, it was exclusively for falls with dents, but in this Blade model, it is designed to generate strong flashing with a slight shaking of the body by eliminating the dents and making it a flat sided design. Since the migration speed of Blue-back fish is very fast and the weight on the hook during the strike and fight is heavy, we adopted a single hook that is stronger than the triple hook. It is the completion of a metal jig that takes advantage of that one chance and does not miss the hooked fish.

If you continue to use the Blade, the rotation will deteriorate due to the erosion of seawater, and the Blade itself will become dull. Of course, if you continue to use the hook, you need to replace it. Although it is designed exclusively for the metal effect Blade, it is also ideal for lure tune-ups.

Athlete + 45 SVG Light Game

Equipped with the vortex generator, it achieves a stable and long flying distance even though it is a small minnow. Due to the flat side design, strong flashing is generated during retrieval, and it shows appeal beyond the size. It supports a wide range of targets such as plating, barracuda, sea bass, rockfish, etc. This is a small minnow that allows you to experience an 'Overwhelming ease of use!'.

Athlete + 12 / 14 VG

"Athlete Minnow" that made the basics of minnow. Athlete+ was born, which was made by adding Jackson's fishing technique to an athlete minnow that was completed to the extent that there was no need to change. By installing a vortex generator, a stable flight distance is obtained. The flat side specification generates strong flashing during wobbling roll action. In addition, the appeal power has been further enhanced by increasing the body height compared to conventional slim bodies. With these added performances, not only sea bass but also vast surf games will attract fish eaters with their strong presence. Please experience the athlete+ that will continue to increase the fishing results.

| | Size | Weight | Туре | Hook | Color | Price |

| 14FVG | 140mm | 24g | Floating | #4 | 000101 | ¥2.100 |
| 14SVG | 140111111 | 30g | Sinking | | | +2,100 |

A crustacean-type hog worm that targets Chinu and rock fish and imitates mantis shrimp, crabs, and shrimp. Despite its compact body size, each part firmly grips water and pulses with a powerful action. Large thick claws move water with a pulsing flutter action during falls and retrieves, the tentacles on the other hand tremble finely as water passes over them, giving the Chinukoro Hog a very lifelike action. The other tentacle moves lustrously and triggers the bite when you are doing small actions such as shaking and short twitches.

The connection between the body and the head is fine, and the lower part of the head has a characteristic bulge giving this section of the lure another opportunity to move easily and provide even more action. By attaching a small nail sinker of about 0.3g to the lower part of the head, you can induce a further erratic and spontaneous action, so please try it. We focused on the hardness of the material, and by reducing the salt content to a small amount, there is a unique hardness of the body that contributes to the lures overall performance. We blended the scent of crustaceans and squid to strongly stimulate the fishes sense of smell. We want you to experience the power of the Chinu Hog, which is the final crustaceans form and a specializes lethal weapon for getting the bite.

The heavy sinking minnow can gain an overwhelming casting distance from their own weight, but the swimming action can be poor and only noticeable with the fast retrieve. But the G control generates lift by the second lip in the center of the belly of the lure, this creates resistance and cancels out the sinking force which dramatically improves the response and action with low-speed retrieves. Even though it only weighs 20 grams, you can retrieve it at the retrieve speed of a 10 grams class sinking minnow.

G-Control 20

G-GOMUTO 140

Well known for the new concept lure that has 2 lips sinking minnow "G-control", this time we released 120mm for off-shore fishing.

120mm 40g Super Sinking - 8Color

It goes without saying that the ability of the wide range of retrieve speed, long

Have you ever fished with a hard bait and changed to the jighead and worm, and got a bite immediately? Worms made from soft materials are very effective against vigilant fish, due to their life like feel and softer actions. In recent years, a finesse style using a jig head of around 10 g has attracted a lot of attention. In order to establish this style of fishing, the head part plays an important role, and factors such as the casting distance, stability in the air, stability of swimming, and the sink speed, also range keeping ability, and horizontal posture are required for surf. The finesse head has a dent in the lower part of the head, and by holding the water flow, the stability of the action and the

horizontal posture are produced. By making the cross-sectional shape of the head triangular, the water flow across the top is improved, and the sinking rate to the bottom and the depth range are achieved. The weight distribution of lead enables us to adjust the flight stability and increase the casting distance. The finesse head incorporates all the necessary elements for successful fishing including its hooking performance. Adopting a triple-clene with a high degree of freedom keeps the fish hooked and doesn't allow the fish to throw the hook during the fight, it can be attached to the lower eye in normal areas, and it can be attached to the upper eye for points where there is a root hook so that you can attack with peace of mind. Finesse jighead has been developed to successfully entice and attract the fish that are normally so difficult to catch.

The Bone bait was released as a rock heads series, but it is an item that has a multipurpose performance like no other and has fascinated many kinds of rock fish by the ultimate basic shad tail. Even in the surf, the shad tail worm is attractive to fish species and promises fishing results, thus many anglers use it, and in recent years, the proportion of flat fish has increased in the SNS posts of "# Bonebait". There are various target fish that can be caught in the surf, and sometimes welcome guests such as red sea bream also come, so this time we selected the color range based on the repeated fish captures, as the surf color, and 4 colors that achieved outstanding results with many large flounder.

Hook deeper! Body shape to not miss the caught bite

The flat body and half ribs allow the worm to bend in one direction the moment you bite. As a result, the worm is hard to curl and the hook is easy to come out, so the hooking performance is improved.

Bring it to the bite with glossy movement and vibration by fine ribs The decisive factor for feeding is the slight vibration generated by the fine ribs carved on the body. Even for a moment when it reaches the bottom, it

automatically appeals to the bite without the angler's knowledge.

Compatible with a wide speed range

The body and tail are designed with a perfect balance, and the worm can be used without rotating even during a fall using a heavy sinker or during a high-speed retrieve

It flies too much even too little

•UVcolor

Suitable size for light salt water fishing and suitable for various fish like horse mackerel, barracuda, rock fish and so on.

1g focuses on catching horse mackerel and has single hook with tinsels to make the most fussy of fish bite. 3g and 5g have a treble hook for multiple uses and can target multiple species.

Light lures usually don't have long casting ability, but this lure has made it possible and enables you to fish harbors, river mouths and rocky beaches where the need long casting applies, and helping the angler catch species they have never reached before. If you let it fall naturally, it sinks fast, this fall speed is one of the attractive points of this lure, and very effective to fish deeper water situations. Not only falling fast but also a rolling action on the fall at the same time, which appeals to have macketed betracted and rock fish. The David has a great mix of natural falling speed while keeping a rolling action.

It flies too much

The larger version of the Daniel are suitable for surf, harbor, river and beach and applicable for almost every middle size fish such as Flounder, seabass and flathead, with great casting ability, it reaches wider areas and more fish.

Since it casts further than you imagine, it will open up even more fishing situations for you, The Daniel will reach areas you have never fished before and for its size has an amazing casting distance ability, even the smallest sizes cast extremely well.

It has strong rolling action and is appealing to multiple fish species and with its distinct action and vibration and irregular sonic set the Daniel above all other meatal vibration baits.

It falls to the bottom quickly and rolls well when falling and the treble hook on belly allows for maximum hook exposure and increasing hook up rate.

It flies too much even with a blade

Perfect size for blue fish and other medium to large sized pelagic species. There is a small spinning blade set at the tail behind the rear treble hook, its placement is crucial and does not interfere with the hook, but entices the bite and increases hook up rates. Not only does the blade add increased flashing and vibration but adds to the lures wobbling action and can be varied with retrieve speed used for the appropriate species. It can adjust to fast retrieving speed too. The blade can also be used on fast retrieves and can be used as a buzz bait style.

The body is designed being considerate of the blade and its placement, so the blade will not reduce the long casting ability which characterizes "Tobisugi Daniel" series. The blade also enhances appeal when falling and an assist hook is placed at the rear of the head, which increases the chances of the hook set.

Swimming attitude is natural and also when it falls it is stable which cause no line trouble. Even it is equipped relatively bigger size hooks but no stress when you use this lure

28g Size:110mm/Hook:F#6 C#6 R#6/¥1,000 35g Size:115mm/Hook:F#6 C#6 R#5/¥1,100

Popular vibration lure Teppan vibe gets longer and bigger!

Its 115mm long body has well balanced weight with long cast ability to search large area.

33g Size: 106mm / Hook: #2 / ¥1,150

42g Size: 106mm / Hook: #2 / ¥1,200

A strong model with a big size appears in the popular TEPPAN series.

Hook and body plate were strengthened and developed with the theme of not missing when hook on.

In particular, there is a hot request from the shore angler, and a large-diameter eye that can be fitted with a split ring or cross lock snap is adopted. The weight was arranged so that the swim was almost horizontal, and the vibration with fine pitch was transmitted to the hand, and the drag resistance was adjusted to reduce fatigue.

Once you hook on it, don't miss it with Power Fight. Memorable fish with Iron PAN Strong.

Teppan vibe has achieved countless successes and has reputation as a strong long lasting metal vibe. Applicable for wide range of fish from sea bass, blue fish to rock fish. Teppan Blade was proudly designed for the fearless angler who is not afraid to cast anywhere.

This lure has developed based on the idea of "The head for rock fish which anyone can fish easily using feel". Through field work, we have realized the importance of vibration and flashing for rock fish. Also its balancing weight is placed backward so anglers can achieve overwhelming cast distance and fast sinking, which can be advantage for wide area fishing allowing t he angler to cover so much ground

SALT EDITION

Quake claw salt edition which gets bites and reactions compatible effective not only for rock fish games but also for various games such as flat games from a boat.

Size: 3.25inch / Quantity: 4 / ¥530

A real silhouette worm with the motif of "shrimp", one of the staple foods of rock fish.

But the essence of this worm isn't just about its appearance. The work done in various parts of the body induces spontaneous action in response to a small amount of water flow, producing good lure movement, even in tough situations. With a stable swimming posture, It performs best with swimming fishing methods using jig head rigs with the lift and fall style retrieves. In addition, the bottom stay using a free rig will produce the best fishing results.

3g Size: 31mm / Hook: F#10 R#14 / ¥500

7g Size: 41mm / Hook: F#8 R#10 / ¥500 10g Size: 46mm / Hook: F#9 R#8 / ¥550

Down-sized metal jig from the standard shore jig lure "Gallop assist fall edition". This lure covers all light salt game such as rockfish, horse mackerel and soon. Sliding fall action is so effective at light salt game despite its compact body.

GALLOP Assist **Long Cast**

32g Size:52mm / Hook:F#12 R#8 / ¥740 42g Size:56mm / Hook:F#13 R#8 / ¥780

Developed for long casting distances, its compact design enables long distance casting, enabling the angler to cover more water. Its size and baitfish profile imitate prey perfectly and work on various retrireves and retrireves speeds.

GALLOP Assist **FALL EDITION**

30g Size: 67mm / Hook: F#12 R#6 / ¥740

The sharp edge and the outline of the body which gives a compact and thickness are characteristic.

The action of falling that is reproduced the movement of the weakened bait induces the explosive bite. The concept model specialized in the falling of a metal jig.

GALLOP Assist **Slow Fall**

18g Size: 47mm / Hook: F#11 R#10 / ¥680

38g Size: 60mm / Hook: F#13 R#6 / ¥780

Has been designed for a slow falling speed and has a fluttering action on the fall, which allows long span fishing and target fish such as rock fish.

Its action and speed appeals to feeding habits rather than creating just a reaction bite

120g Size: 123mm / ¥1,050

100g Size: 116mm / ¥1,000

This range was designed to give the angler conscious control over the lures action, in particular when it is falling. Lightly applying tension to the line will get the lure into a standing position and sink it faster, and you can send it to the exact depth range you want. The pull resistance during jerk is also light, and it slides with an enticing width that makes it easy for fish to prey on. When the tension of the line is released after shaking, it will be in a horizontal position, and it is possible to easily create a pause and a slow and fluttering fall that fish cannot resist. Not only does it fly well, but it is also an easy-to-use metal jig that makes it easy to control the lures posture at the will of the angler.

A sword fish that reacts quickly to the falling bait. Metal jigs are very effective as fishing methods that make the most of their habits. However, lead has a fast fall due to its characteristics, and even if it is made to fall slowly, it will pass through the sword fish range in no time. For this reason, the Tachi jig uses light zinc. Zinc is a light material with a specific gravity of 7 compared to a specific gravity of 11 for water. Taking advantage of this lightness, it was possible to increase the appeal and raise the bite rate by slowly falling the range where the sword fish is located. Since sword fish are sensitive to light emitting objects, the color lineup incorporates full glow and a highly flickering zebra system, especially in the glow system. Wire assist is standard equipment to prevent line breaks inherent to fangs. A Tachi jig with no blind spots to attack the sword fish was completed

Athlete 17SSV/17FSV

17FSV Size:170mm / Weight:26.5g / Type:Floating / Hook:#4 / ¥2,100
17SSV Size:170mm / Weight:30g / Type:Sinking / Hook:#4 / ¥2,100
Migrant fish Sea bass Flounder Lazusslmon

The Athlete 17SSV and 17FSV with the Vortex Generator enables a mazing casting distance

Long minnows require a certain technique to cast well due to their length and not be aerodynamic and many longer minnows are difficult to cast long distance with stability One of the biggest reasons for the casting difficulty is the shak ing movement of the body through the air which generates extra air resistance, which red uces casting distance. The Athlete 17SSV and 17FSV have the vortex generator on its lip, which can mitigate air resistance and reduce body shake, giving the Athlete 17SSV and FSV stability in the air and in turn longer casting distances consistently. The average casting distance has been tested completely and found that a lure with the vortex generator increases casting distance by 10.3%. The angler feel and experience the difference and its posture st ability even against the wind.

It has the sharp darting action that is well known form the Ath lete series and also a wobbling and rolling action with slower retrieves, allowing the angler t o trigger reaction bites by jerking when required.

105FVG Size: 105mm / Weight: 12.5g / Type: Floating / Hook: #6 / ¥1,800 105SVG Size: 105mm / Weight: 17g / Type: Sinking / Hook: #6 / ¥1,800

Athlete+ was born, which was made by adding Jackson's fishing technique to an athlete minnow

that was completed to the extent that there was no need to change. By installing a vortex generator, a stable flight distance is obtained. The flat side specification generates strong flashing during wobbling roll action. In addition, the appeal power has been further enhanced by increasing the body height compared to conventional slim bodies. With these added performances, not only sea bass but also vast surf games will attract fish eaters with their strong presence. Please experience the athlete+ that will continue to increase the fishing results

Athlete 12SS/14SS

12SS Size: 120mm / Weight: 21g / Type: Sinking / Hook: #5 / ¥1,900 14SS Size: 140mm / Weight: 25g / Type: Sinking / Hook: #4 / ¥2,100

The legendary lure, Athlete. It inherited the action that rolling in slow retrieve, and wobbling rolling action increases with the retrieve speed. Also combined with excellent stability performance under any situations

Athlete 13MDS

The ultimate Sardine imitation, designed by Ryo Ikuma

Every autumn, the shores from Osaka to Kobe are bustling with sea bass and blueback feeding on the large Sardine schools. We have haunted the area and tested not only Jackson's lures, but various other brands during the Sardine season. Our final conclusion has the "Athlete 14SS" as an absolute standout performer. With its perfect baitfish profile outline, its action and flight-distance and it's immeasurable ability to catch fish after fish which led to countless captures of lunker sea bass and yellow fish. This unique style of fishing requires a particular depth for the lure to run at, and keeping in mind to make this an easy lure to use, so we have adjusted the design to get the Athlete running at the correct depth and get it to the depth quickly and easily. Now reaching the required depth is simple cast after cast, getting the Athlete in the strike zone every time! The legendary "Athlete 14SS" just got better! The revised Athlete has 3 design focus points that make the best even better. First, a crucially designed bib lip shape to enable the lure to travel at the correct depth and reach it fast, while maintaining its action. Second, the body shape enlarged to move more water and increased sonics, therefore becoming more noticeable to all predators. Lastly, the weight transfer size has been changed from 4pc. (6.6mm) to 2 pc. (8mm) to produce a tight baitfish profiled action at all retrieve speeds. Color selection was completely renewed with amazing colors to suit the style of fishing the new Athlete is designed for. We worked with respected experts in the Sardine baitfish style of fishing and everyone accepted the offer willingly, acknowledging the Athlete's already high status, and enjoyed the reconstruction of this lure. Upon completion of much research and development, "The New Athlete 13 MDS" was born. We are confident in the results and are pleased we have a new world class lure that can proudly carry the legendary name of "Athlete"

Athlete 12SSP/14SSP

12SSP Size: 120mm / Weight: 33g / Type: Sinking / Hook: #4 / ¥1,800 14SSP Size: 140mm / Weight: 40g / Type: Sinking / Hook: #4 / ¥2,100

The Athlete 12SSP is a sinking pencil designed for surf and flat head fishing, however over time its proved that its very effective for blue fish or sea bream also. Then, the new Athlete 14SSP was born.

It is wire through construction and capable to cope with large predators such as big jaw sea bream, big blue fish, huge sea bass and flat fish. Its balancing weight was moved a little forward to give it a na tural fall, which is useful for both surf and shore. The lure during casting holds its stable posture which enables anglers to cast long distances and as much as metal jigs. Its larger size makes the action wider, and moving it in a big arc it creates irregular actions with faster retrieves, driving fish to strike the lure with aggression.

Size: 105mm / Weight: 24.5g / Type: Sinking / Hook: #8 / ¥1,650

The "Athlete 105SSP" is the next in the Athlete series alongside 12SSP and 14SSP

The size of 10.5cm is a deliberate decrease to replicate the size of the actual baitfish that's most common in the ocean.

Generally, it is said that the small plugs can have a shorter casting distance, but the 105SSP has been designed to conquer this problem with strategically placed weight and balance. Its swimming action is very tight wobbling and rolling action to match its baitfish profile size, entices the fish to strike.

Glow color

BASS

Size: 125mm / Weight: 17.5g / Type: Slow Floating / Hook: #3 / ¥1,900

Shallow water is a perfect hunting ground for fish, including large fish to gather and prey on food.

However, because it is shallow, there are many issues such as stealth, retrieve speed, and flight distance, consequently it's not an easy style of fishing. The "Shallow Swimmer" was born to specifically fish shallow waters. First of all, since a shallow water surf absolutely requires a flight distance Jackson have designed this lure with VG, achieving a stable and excellent flight distance even though it is a floating minnow. Next, the special lip design, it has a firm flow even in dead throws, and the action of the floating lure in shallow water invites the fish strike. Furthermore, the side of the body is flattened to maximize the flashing effect. Shallow surf, rocky shore, estuary, tidal flats, all these areas are now not only accessible but are able to be fished successfully with the "Shallow Swimmer". The 3rd and 2nd hook specifications can be used for larger fish species.

70mm Weight: 6g / Type: Sinking / Hook: #12 / ¥1,600 80mm Weight: 8g / Type: Sinking / Hook: #10 / ¥1,600 FR70/FR80/FR105 105mm Weight: 15g / Type: Sinking / Hook: #4 / ¥1,700 Seabass その他

It corresponds to "Super-Fast Retrieve" of day-game.

It equipped meandering action from side to side in order not to be given up by fish when super-fast retrieve. It can correspond to not only fast but also dead slow, and has the high stability and versatility from the trolling of night game to ultra-fast retrieve of the day game, and twitch and jerk.

78S Size: 78mm / Weight: 11.5g / Type: Sinking / Hook: #6 / ¥1,550

78SF Size: 78mm / Weight: 10g / Type: Slow Floating / Hook: #6 / ¥1,500

The Jester is designed to dive and reach the strike zone quickly, with a fast floating action when paused to attract seabass. The tow point is designed to attach the snap and tune easily. Jester Minnow can be used on a variety of predatory species.

The Quick Head has two separate tow point options, a sliding version and the standard fixed eve version, having both options gives the angler a wide variety of action and depth options. The sliding option allows for better bottom release when the head touches the bottom minimising snagging but still allows for maximum action in combination with the Quick Shad and its intense rolling action.

The fixed eye tow point is a more direct towing point and allows the angler to control depth and be as close to the bottom at all times and a slow retrieve will add a slight vibration action in addition to the Quick Shad tail action and being more direct can be made to dart with drastic rod actions.

The hook keeper section of the head allows for not only a quick change of the soft bait, but also holds it firmly but still allows the soft bait to behave with a very natural action. The shape of the head itself gives it the action and also maximum flash with its triangular flat sides and shape, which has been proven to be very appealing to fish. A premium finish is applied to make it a tough resistant head and always looks good and natural to fish and the plate through tow point system makes it very strong.

The combination of the Quick Shad with the Quick Head give the angler a performance product with many options.

The Quick Shad has been designed with a thicker more solid body so it keeps its shape during the cast and also retrieving the lure. and also making it hold well on the hook keeper system of the Quick Head. The size and shape of the Quick Shad produces maximum water displacement and along with its rolling action and tail vibration is very enticing to fish species.

The body shape is purposely flat on the bottom to make it easy to fix the hook system and there is a slit in the tail to place the trailing treble hook to give optimum hook up rates from tail bites. The very rear of the tail points upwards to eliminate hook fowling from the rear hook and allow the soft bait to act naturally and give maximum vibration and wobble.

The combination of the Quick Shad with the Quick Head give the angler a performance product with many options.

Pin Tail Tune 27 Seabass Myrant fish Flounder & Ofts

Size: 90mm / Weight: 27g / Type: Super Sinking / Hook: #6 / ¥1,600

Our long selling standard lure "Athlete" are tuned as a heavy weight minnow,

It is "Pin tail tune" which is designed for fast retrieve with long cast ability. Fast retrieve and long length dart action by continuous jerks attracts wide range of fish.

This lure achieves excellent results across the country here in Japan.

It has continued to fascinate all kind of fish eaters such as sea bass of cause, Amberjack, bonito, flounder, hair tail.

Pin tail is tuned to specialize Spanish mackerel.

After deep survey of custom and way Spanish mackerel eat baits, We have tested thousand times, and develop this lure. The result and knowledge is reflect to pin tail series.

105mm Weight: 35g / Type: Super Sinking / Hook: #4 / ¥1,800
120mm Weight: 42g / Type: Super Sinking / Hook: #2 / ¥2,000

The Pintail Sagosh(i baby mackerel) was designed and released specially for baby mackerel for the first time in the industry, and became very popular among keen mackerel anglers. On the back of its popularity and the need for a larger model to target larger Mackerel we have designed the Pintail Sawara (Spanish mackerel) which contains all the performance features of the Pintail Sagoshi. 2 sizes are available: 105mm with 35g and 120mm with 42g. Not only increasing its size, but it was designed freshly to specialize the use for spanish mackerel while keeping Sagoshi tune's specific. Pintail Sawara tune can be used in comb ination with the Sagoshi tune for different purposes and for targeting various sized fish from the school, with Sawara Tune to be used to target larger mackerel. The angler can now target larger fish with all the amazing features of the Sagoshi Tune.

Anglers who search for big monsters, Pin tail tune 40K was born with welded wire through system.

It is not simply heavy but strength is equipped you can fish dorado, bonito and blue fish at off shore, and mackerel from surf.

The range of target is expanded with this monster hunter lure.

The Jackson G-Control series is world renowned for its high speed ability and tight fish catching action, so the larger G-Controlling model was natural progression from the current sizes.

The G-Controlling has all the features and attributes of the smaller 28 and 40g models but has an increased size of 180mm and has been purpose designed for high speed trolling for large pelagic species. The G-Controlling secondary bib adds stability at speed and also when trolled in turbulent waters with a diving depth of

It's hardware and wire construction have also been purpose designed for larger species and the G-Controlling has proven itself in testing time and time again.

 $Size: 130mm \ / \ Weight: 23g \ / \ Type: Floating \ / \ Hook: \#5 (3hook) \ / \ \$1,650$

Surf Glide was developed based on a strong theme of "casting ability" for surf fishing.

Its design was purely to keep a maximum casting distance in windy conditions particulary in the surf, representing the name of surf glide.

The internal weight system is the key to its casting ability, the weight shifting to the rear of a long lure keeps the forward trajectory. The body is made from polyhedral and giving it maximum buoyancy, so the lure can sustain with 9mm large tungsten weights. The weight system has a double benefit with an energetic wobbling roll action when retrieved, the larger body shape and profile is a baitfish profile that can be detected easily even in white water conditions. There are two options available with hook set up, with 2 or 3 treble hook can be used with this lure and still remain effective in the estuary or rugged offshore. The weight transfer system is nothing new, but most long cast minnows have poor actions, but the Surf Glide has both elements covered. Surf Glide is a floating minnow of high performance for seabass and will be very suitable for many anglers.

Size:90mm / Weight:30g / Type:Super Sinking / Hook:#4 / ¥1,700

The lip is designed like a lower jaw to prevent body from coming up from surface, Fall posture is naturally horizontal. Center of gravity is put the lowest level and wire through system achieve high strength to its body.

Size: 115mm / Weight: 45g / Type: Super Sinking / Hook: #2 / ¥2,000

The features of Muscle shot are inherited with size 11.5cm and 45g. Target is both shore and off shore, with wide range of fish such as Bonito, Mackerel, Tuna, Amberjack and Dorado.

Available in 110mm, 140mm and 180mm with a wired through construction for large predetors.

A long casting weight balanced sinking lure blue water species such as tuna, GT, King fish, Sail fish, Dorado and Spanish meckerel.KAIKEN, with its sliding action at high and slow speed retrieves is FISH MAGNET!!

The NEW KAIKEN Popper is game changer! The Kaiken Popper rides the wave of success from the Kaiken stickbait, and is the follow up model that has been designed with all the high performance features of the Kaiken stickbait. Its 140mm long with a wired through construction and its large cupped face provides maximum water displacement when retrieved driving bluewater species crazy and into a feeding frenzy.

The kaiken Popper is equipped with super sharp and strong hardware and a range of amazing bluewater specific colours.

BASS

Chinukoro vibe is a sepecial vibration bait for seabream, Blackhead and yellowfin seabream, this vibe has great appeal to seabream and other species looking for food in shallow water like shrimps and crabs etc. We recommend using "Chinukoroli" and "Chinukoro vibe" properly to expand the possibilities and catch rates of seabream fishing. Two things below are the points the team focuesd on.

1. Absolute casting ability

This vib comes in 8g and 12g, which is a little lighter than regular seabass vibration baits, however it flies perfectly because of its unique body shape and exquisite weight balance, it will seriously blow your mind. The 8g vib is equivalent to 10g of Chinukoroli, and 12g ones flies even further, also it flies straight with stability and accuracy so the angler can always hit the target.

2. Snag free

This vibe is relatively snag free just the same as Chinukoroli, even if it gets stuck in the rocks, the body rises up using the tow point as a fulcrum enabling the angler to release the lure easily. It falls to the bottom with the hooks facing up, which appeals eliminating the snagging problems with most vibration baits. The design and hook choice and placement will allow the angler to fish heavy cover and rock covered bottom where most vibrations will get snagged up, its action is super sensative and the angler can finesse the lure and feel every bite.

Hook: F#10 R Original Assist Hook / ¥1,600

Cast and twitch as a pencil bait makes ebi panic as if it is in 'Panic' like running away from predators. It has dog walk action and its tail cup creates sweet pop sound. And also making splash precisely.

Size:70mm / Weight:7g / Type:Floating / Hook:F#8 R#6 / ¥1,500

The popper "R.A.POP" is designed for popping game of a black sea bream that has generated and spread to the whole country in Japan.

It has been condensed the special performance for against a black sea bream such as "favorite pop noise of black sea bream", "standing posture for easy predation"

55mm Weight: 5.6g / Type: Sinking / Hook: #8(Double Hook) / ¥1,200 65mm Weight: 7.6g / Type: Sinking / Hook: #6(Double Hook) / ¥1,300 75mm Weight: 10g / Type: Sinking / Hook: #4(Double Hook) / ¥1,400

The Bottom Magic has always been a great lure for trout, but its unique shape and action has been recognised as a very effective lure in larger sizes as well and in particular in saltwater situations. The two new sizes of 65mm at 7.6gm and the 75mm at 10gm still have the action of the 55mm, and now in a range of new fish catching colours that suit both fresh and saltwater fishing. Fitted with strong and sharp double hooks for the ultimate hook up rate

OKG

Size: 70mm / Weight: 7g / Type: Floating / Hook: #6 / ¥1,500

Riskbait is pursued necessary elements to make a bite. The most important thing is strength of pushing water. Pushing water makes higher interest of fish more than slide action. Combination with RA pop makes respond to many situations to get bites!

The mysterious shape of the lure is expanding the playing field beyond the boundaries of genres such as sea bass, trout and rockfish. The extremely slim outline can direct even the slender bait not only an insect, halfbeak and whitebait.

Size: 55mm / Weight: 4g / Type: Slow Sinking / Hook: #12 / ¥1,200

It tempts fish that are looking upwards for bait especially with its slower meandering action due to the fulcrum point being slightly set to the rear of the centre

The falling speed and action of the Mijinko has been specifically designed for Aji. Mijinko works in a variety of conditions, and able to fish various depths. The Mijinko can be dropped and twitched in the strike zone to attract the bite, and not only for Aji but a variety of light tackle species.

From the both sides the instinct of predation of no action and long length dart, and the reaction bite lead to hit by stimulating the target. It is the no-action plug, such as the worm that can manage easily a range and keep horizontal posture by just reeling, but also the magic plug that shows the sharp dart and runs from side to side by adding twitching. The twitch with line slug is a tip to get bites.

Glow color

ACCESSORIES

Selected

The Pipi Ring has been designed and then developed with over one year of research behind it.

The design team have researched and recorded feeding information of fish like Rockfish and Horse Mackerel and produced the Pipi Ring accordingly. Taking care to imitate size and profiles of the food for these species. It matches with the Jazz jig head system which size and hook stength and size range suit the Pipi Ring and fishing styles perfectly

Size: 2inch / Quantity: 6 / ¥440

The size and shape of the Pipiring directly appeals to the feeding instincts of horse mackerel and rockfish as their predatory target, and was developed to mimic shrimp, mysidacea, and small fish. However, small polychaetes are also one of their staple foods, and Pipilong was developed as an additional size model in response to this fact giving another size option to the conventional Pipiring. In addition to softness and ease of suction, the shimmering characteristic of the longer body is a finish that gives the angler another variant of the Pipiring.

Size: 1.8finch / Quantity: 6 / ¥440

The Tiny Squid inherits the back slide action, only in a smaller version, its so life like and a perfect baby squid imitation thats meant to be in the ocean. No need to use lead because of its nail sinker, which eliminates fish cautiousness simply by changing the direction of hook, it works with retrieving and drifting perfectly. The body profile of the Tiny Squid has been designed to enable sinker use in the pockets and its body shape prevent rolling, even when back sliding. The Tiny Squid is just perfect for rockfish and can also can be used with a jig head. 1.3g tungsten nail sinker is suggested for deep water spots such as from a boat or tetra. 0.9g is recommended for shallow water.

Fluorocarbon line is prefered to assist in the backsliding action. After the backslide, slowly retrieve and let the Tiny Squid float, then pause causing the Squid

This technique imitates a real Squid and its action is life like and irresistable predators

BLAST, BEATS BEATS

The new bass rod series from Quon which released the ultimate standard rods for beginner to tournament anglers, with rod actions such as Trickster and Bastard. These are the ultimate standard rods for beginner to tournament anglers, with rod actions such as Trickster and Bastard. These are the ultimate standard in rods with a reasonable price but diverse line-up and advanced blanks that are full of detail. The lineup suitable to various tackle, field and fishing style and all with different qualities, one by one rather than just a multi bass rod such as dedicated plugging, jig dedicated model, or for tough conditions model. The blanks have different materials for each model for delicate finesse rods, it is based on 36t carbon material with superior sensitivity, 24 to 30t for moderate stickiness, 40 t carbon material for heavy rods requiring more power. By subdividing for each model and combining different kinds of different elastic materials, we have succeeded in producing specific rod actions. In the search for further strength, the blank sheets are wound not only in one direction(0 degree)but also in the direction of 90 degrees and tightened with a carbon tape in the direction of 45 degrees. The multiaxial structure dramatically improved the rigidity and twisting and crushing. The guide is a stainless steel frame SiC guide made by Fuji Industry Co., Ltd. which is excellent in durability. this series also adopts a new standard thin ring "SiC-S". Even compared to the current SiC ring, it is lighter with higher sensitivity due to the weight reduction and the inner diameter of rings have also become wider, It also helps to improve the casting distance. The reel seat of the baitcasting model adopts a NEW micro trigger seat manufactured by Fuji Industry Co., Ltd. Easy to grasp, trigger with no wasted part and excellent operability. EVA is applied for grip. It has excellent durability and does not slip on rainy days and wet hands. With the fusion of technology cultivated with Quon and advanced parts, everyone enjoys the essence of bass fishing casually, these are truly the ultimate standard in bass rods.

[SPECIFICATION] SPINNING MODEL

BBS-511XL-AS The very best finesse ALL CARBON SOLID

An all-carbon solid model which inherits the flow of super trickster and trickster, the scraped tip can be delicate with a natural action that gives the lure a sense of life. In addition to being able to fish a light rig, it also copes with super tough condition game with super light weight rig. Suspension performance of the full solid material without any loss sensitivity that enables the use of thinner lines that continues to give pressure to bass while protecting the line from an intense fight. With the short length of 5 feet and using the thin SiC ring, weight reduction is achieved and greater operability than ever before. Perfect for small rubber from 1/32 oz to 1/8 oz. lightweight rig such as wacky and downshot, and also suitable for fishing the extremely small rig necessary for chasing small mouth bass.

BBS-64L-XLST For The Worming & Small rubber jigs | SOLID TIP MODEL

Tubular + Solid Tip model which is an essential model in finesse fishing, with a carbon solid tip which can manipulate the lightweight finesse rigs used, it easily detects a faint bite and combines a high elasticity carbon tubular harnessing power required for bass. A model specialized for finesse worming, such as a small rubber swimming baits and finesse worming

BBS-64L For The Shading specialists

Light versatile spin rod specialized in the use of small hard plugs such as flow shad, a sticky fast tapered blank based on a medium elastic carbon material which is superior in casting performance and operability using small hard plugs, its an exquisite length suitable for Run & Gun in a vast field and also super accuratet, it will not limit the field nor the fishing style. A spinning rod capable of versatile games with a plug such as a shad.

BBS-69L-ULST Finesse for the long casting SOLID TIP MODEL

Long finesse rod of tubular + solid tip, a long rod that combines the evolved multiaxial high power carbon tubular butt with a UL-class carbon solid tip capable of delicate operation with sensitivity for big bass. A long length of 6.9 ft. corresponds to a rig of long line leader such as down shot and light caro, etc. A perfect long casting rod and very suitable for long distance from the bank fishing styles.

| MODEL | Length (cm / ft) | Power | Lure Weight | Line | Action | Self Weight | Collapsed Size | Piece | Tip Diameter | Carbon Fiber | Other Materials | Price |
|--------------|------------------|-------|-------------|---------|-------------|-------------|----------------|-------|--------------|--------------|-----------------------------|---------|
| BBS-511XL-AS | | | | | 超Extra Fast | 110g | 180.9cm | | 1.1mm | 98% | Glassfiber2% Epoxy resin | ¥21,000 |
| BBS-64L | 194.3cm / 6ft4in | Light | 1/16-1/4 | 3-6lb | Fast | 102g | 194.3cm | | 1.2mm | 98% | Glassfiber2% Epoxy resin | ¥18,500 |
| BBS-64L-XLST | 194.3cm / 6ft4in | Light | 1/32-3/16 | 2.5-5lb | Extra Fast | 95g | 194.3cm | | 0.9mm | 98% | Glassfiber2% Epoxy resin | ¥19,500 |
| BBS-69L-ULST | 206.3cm / 6ft9in | Light | 1/16-1/4 | 3-6lb | Extra Fast | 103g | 206.3cm | | 1.0mm | 98% | Glassfiber2% Epoxy resin | ¥19,500 |

The spinning model adopts Fuji's VSS seat and TVSK hood, reducing looseness with uplocking.

The lightest model with thin rings and titanium frames, downsizing became possible by expanding apertures, and it also became possible to use a smaller guides.

The casting model adopts Fuji's micro trigger seat, a trigger without bulkiness corresponds to a delicate approach and power play as well.

It is natural that if the fishing style is different the rod shall be selected accordingly, we selected different elastic carbon sheets of 24t, 30t, 36t, 40t for each model, and created blanks suitable for each style with a feeling only achieved as if it is a high end product

[SPECIFICATION] CASTING MODEL

BBC-61L-AS The Makimono Special ALL CARBON SOLI

An all carbon solid bait rod composed of solid carbon from the tip to the butt, with a regular taper blank that do not kill the action of hard plugs used when chasing bass. While using 24t solid carbon we characterized the unique stickiness of this rod that makes sure you wont mist the bite. Its action is very suitable from the hook up to applying load to stop the fish during the fight, while using lightweight and improved thin SiC rings. Perfcet for use with a crank and shad, Makimono special specialized in plugging to cover minnow and also top water plugs.

BBC-62ML-LST So-called finesse SOLID TIP MODEL

A bait finesse rod that combines flexibility and rigidity with L class carbon solids with ML class powerful tubular blanks. Lightweight Texas, down shot, lightweight rig such as small rubber and Neko jig. The ability to sense the change of shaking and bottom, it has a delicate tip like a spin rod feeling. With Bait's unique rework its a renewed ability of accuracy and performance, but it can achieve aggressive finesse fishing styles also. Tightened with carbon tape, the multi-axis torqueful tubular body exerts power that will not be defeated by big bass, we pursued the essence of bait finesse, approaching silently, and conquer with power.

BBC-68MH Jigs & Texas are my favorite

A model specialized for rubber jig and Texas rig, it consists from 40t carbon material with high elasticity and hardness and 30t carbon for stickiness with power. Sensitivity is a must to deal with bottom fishing so this rod is excellent in jig operability and has enough power to fish in cover and weed. Exquisitely balanced tip is not only hard and has great hooking ability to hit the upper jaw with a hook while keeping a lure in the mouth of the bass. This one is for anglers who enjoy using Rubber jig and Texas rig as their main lures.

BBC-610M The Wide Searcher

Rod specialized in using spinner baits up to 3/4 oz, cranks, vibrations baits as well. We set the medium elastic blanks based on 30t carbon to a regular taper and have developed the excellent hook up rate style rod while not losing any sensitivity or changes to the lures action. Its 6.1ft length is excellent in long range performance and can search wide and far and a versatile model combining not only long cast but pinpoint casting accuracy.

BBC-71XH The Versatile Sniper

Extra heavy versatile rod for heavy cover fishing using lures such as Texas Rig. Rubber jig, frog and power games that require big baits. Blanks are highly elastic but also sticky and have exquisite settings that combine the sharpness of manipulating heavyweight rig as desired and the ease of big bait use. A butt thats reinforced with a strong shaft with multiple shafts and improving its rigidity and exerts enough power to handle fish in the monster class lurking in the heavy cover.

BBC-73MH Flipping, Swimbaiting, a versatile weapon!

Cover a wide range from light flip to swim bait, it is a long rod which has superior long casting capability and it is a long rod which can be applied to flipping, a long leader rig like Caroliner, casting over bush and tight range control. The blank, which combines 40t and 30t of carbon material in a well-balanced manner, sticks moderately although it has high elasticity, converts it into a combined force by placing weight of lure on the entire rod,with a balanced rod action its a versatile weapon which is suitable for a wide range of lures, from worms and jigs and also hard plugs and wire baits, small and medium swim baits and big baits.

BBC-85XXH The Prime weapon

Blast Beats custom Swimbait model. The Blast Beats Swimbait rod has been specifically designed to cast and fish larger baits. The combination of materials, taper, guides and grip design all combine to create a rod that is purpose built to use larger baits and catch larger fish with comfort, accuracy and success. The rod uses Fuji SIC guides on a 40t carbon material and with a longer grip gives this rod the ability to load correctly when casting larger baits long distances. The Blast Beats Swimbait rod is suitable for lure weights from 3-5oz (120g-140g) and line PE 30-80lb.

54 - BASS - 55

SUPER THE NET

A landing net indispensable for anglers on bank. Trickster net, which became a standard has been improved and create "SUPER TRICKSTER NET". A landing net for a bass that assists the situation where landing is difficult, such as a high pressure field that challenges by narrowing the line to the limit, an approach from a high place that cannot reach the surface of the water, a scaffolding and unstable steep slope. By adopting a one-piece oval frame, the frame is more easily catch fish, and it has excellent strength. The mesh rubber is adopted as a grip, promising a more reliable hold. Additionally, equipping air vent holes and a carabiner to prevent dropout. Easier to handle, evolved more practically. A super trickster net that extends the breadth of your strategy without missing the chance is

ACCESSORIES

Athlete 70LT OKUNOTE Size:70mm/Type:Floating/Hook:#10/¥1,600

A life like bait with overwhelming casting distance!!

The most important thing in recent bass fishing is the presence of bait fish. Throughout the season, regardless of the location, there has been a big difference in fishing results when targeting fish preying on baitfish. The first advantage is casting distance, by adopting a center-of-gravity movement system that has not before existed in this type of surface layer lure, it is possible to give anyone an "overwhelming flight distance" regardless of whether from a boat, the shore, and whether an advanced or novice angler, the distance is possible. It is perfect for dead sticking, unblurred I-shaped drawing, and a finesse twitching action that does not jump off the surface. In addition, ATHLETE 70LT OKUNOTE, has amazing casting pin point accuracy allowing the angler to make direct casts to a target quickly, and never miss!

RWA

SWK

6.6g Size: 48mm / Type: Sinking / Hook: F#8(double) R#4(single) / ¥1,300

Cyarl Blade was originally designed as a trout fishing lure, but it's snag-less function and size is effective for bass fishing also The body size, book and blade movement matched with the belly double book and larger stronger rear single make this suitable for larger trout and of course bass and has been completely tested on both species. This new model Cyarl has a floating and sinking versions that swims, and acts just like a frog, sitting perfectly life like on the pause to tempt fussy fish. The placement of the hooks and the balance of the Cyarl when retrieved make it a very snag proof lure and allow great hook up rates and enable the angler to fish among structure, while the blades vibrate to entice the strike. The Cyarl Blade has been design with imaginative innovation, and has maintained practical function.

The design objective for this lure was to have tight action and allow anglers to feel the pulsing vibration and sonics of the lure right through the rod and to the hands, and so we have the Iga Jig Chatter. A larger flat bladed head is used to create a stronger resistance and move more water and entice predatory species and allow the angler to feel this movement also, the larger bladed head also allows the lure to hold its position in the water column and not rise on retrieve. The combination of the flat blade on the head and the small willow blade on the belly enable anglers to feel the lure movement, along with the combination of both blades actions gives the lure a unique action and also flash to entice the strike. The head colours and matching skirt configurations finish the Iga Jig

Chatter well. The Iga Jig Chatter gives the angler a unique action, feel and a range of fishing situation options.

Professional angler Makoto Igarashi designed this small rubber jig with his extensive knowledge Its concept is to push water and allow fish to find the jig through the movement quickly.

Makoto Igarashi has used this lure at clear water artificial lakes and hazing water which means its versatile and effective

The Jigs strong points are the number and width of silicon rubber and an angle of 90° eye and the thick rubber skirt enables it to glab water well and allows anglers to feel resistance as it moves. The skirt is sparser than normal, which gives fast falling and an easier search. 90° angled eye enables to keep the body

5g Size: 29mm / Type: Sinking / Hook: #16 / Quantity: 2 / ¥1,200 7g Size: 31mm / Type: Sinking / Hook: #16 / Quantity: 2 / ¥1,200

Mastering the art of middle depth fishing will open a new door to bass fishing! Professional angler Makoto Igarashi supervised this Igajig Spin as a secret weapon to become a middle depth master. When bass and other species are not eating from the bottom nor in shallow,

anglers can aim at middle depth not knowing where and whether the lure is moving right, but this is where Igajig Spin comes in. We researched throughly the balance of weight and blade that so the anglers can feel every piece of the lure's movement. Being able to know what your lure is doing and where its placed in the water column will result in more catches. The action can be felt in any depth and retrieve speed through the rod tip into the rod grip. This lure is absolutely a saviour for middle depth style of fishing, but it has great sensitivity and its abilities have expanded so it can be useful not only in the middle depths but in shallow water situations also. A new world and possibilities are waiting for you!

BASS LURE ACTUAL SIZE

A special semi-hard case is attached to KWSM-S46UL-T and KWSM-C47L-T. Because it can be stored compactly, keeping the rod safe when walking trails and streams

[仕様概要]

SPINNING MODEL

KWSM-S49L

A model that supports a wide range of lures, from delicate balsa minnows to scrolls like spinners. with an action that firmly suits shallow water hooking due to low water temperature and fishing

KWSM-S411UUL

A rod that excels in castability by having a short grip and an emphasis on maneuverability. Having the anglers hands closer to the first taper supports technical casts like flips

CASTING MODEL KWSM-C46L

A compact cast motion is required to cast a lure well. And a reliable one when you want to shoot at

KWSM-C411UL

With the spread of bait finesse reels, the frequency of use of lightweight lures weighing less than 3g has increased dramatically. This is a model born to adapt to such times. The release point is easy to grasp because it receives the weight of the lure firmly and with a regular bending curve

KWSM-S50L

The most basic length in Japanese mountain streams. The action is specialized for sinking minnows, which are in great demand, and the slightly longer grip reduces the fatigue of casting and rod work that is repeated all day long.

KWSM-S52UL

A model that supports light lures such as the floating and suspend model minnows, and its needs have

TERESCOPIC MODEL KWSM-S46UL-T

Revised the guide layout to prevent the gradual bending that is common in telescopic rods and adjusted the curve so the load is spread evenly and throughout the curve during the fight and the cast

It is a bait telescopic model that can be stored compactly and allows you to approach the point as you wish with the technical cast.

The upper reaches of rivers, called mountain streams, are in an environment with restriction or covered with ruggedness, and it is often difficult to fish. In such places, many gorgeous fish live, and sometimes large ones are hiding there. Throw a lure to an impregnable point and attracting mountain fish is the real pleasure.

kamasemi Phapsody

However, it is also true that you may feel stressed because you cannot clear obstacles. Therefore, we designed the Kawasemi Rhapsody to be free from the stress in these kinds of heavy cover tight situations. For example, "overhead tree branches", "rocks behind", "grass underfoot", carefully selected lengths that allow you to concentrate on the cast without being distracted by the surrounds. Not only that, but by designing the action so that each model has a role, it corresponds to diversifying lure variations and techniques.

By adopting the SiC-S ring, the cast feel of lightweight lures, which are often used in trickle style waters, has been further improved. On the other hand, heavy sinking, which has a fast initial velocity, can be cast farther by smoothly passing through the guides after release. Sometimes surrounding cover has the angler casting with a sidearm or sometimes underhand to miss a branch.

but with the support of this rod, it will be possible to deliver the lure accurately every time with ease.

NEW Trout Tune Cont Eom

Normal Type Size: 55mm / Weight: 3.5g / Type: Sinking / Hook: #12 / ¥1,300 HW Type Size: 55mm / Weight: 6g / Type: Sinking / Hook: #12 / ¥1,500

Cast ability, water resistance and action sharpness, a standard model with well-balanced elements required by anglers. Two weights have been placed at its center that have been designed to make it easy to grip water on the lip while keeping a natural sinking posture by

Size:55mm / Weight:3.2g / Type:Suspend / Hook:#12 / ¥1,300

Athlete 55S was developed as a small sinking minnow for light salt, which is well know among many anglers. Based on its success the Athlete 5.5S FH has been designed and made into a suspending minnow. A suspending lure is perfect for fussy fish and fish that need a more finesse approach and the Athlete 5.5S FH allows the angler to entice those fish that are normally difficult to catch. Now with the new model anglers can now approach fish in stonger currents and also fussy fish living in stronger water with this new model.

Weight balance in the belly of the Meteora has been designed to provide stability in the strongest currents. But the action and twitching retrieves are easy to control and with success. The Meteora uses a tungsten wei ght to mi nimize the body bulk but keep the weight and balance in fresh water streams.

The body shape and height of the Meteora along with its weight balanced design makes if perfect for use in faster flowing waters as it remains stable, even in faster flowing waters. Its flat sides add flash and with the weight and placement of the tungsten weight the Meteora can be used with a variety of slow rolling and or jerking retrieves in slow and fast water flow. Its fluttering horizontal posture on the pause and fall is also a major reason this lure has been so successful in testing and has been fished with great results in so many situations.

An all-handmade lure brand launched by fishing writer Hiroyuki Muraoka.

"Oryno" means mine in Tohoku's own words.

Oryno was named with hope to be a lure of your only own

The Athlete 9JM is a heavy weighted lipless minnow, the lures shape and formation give it great stability in the air and extra casting distance. Despite the heavy weight the design and shape of the 9JM has been carefully crafted to ensure the lure has the correct action using multiple retrieves, from the slow to high speed retrieves. The ability of the Athlete 9JM to achieve various actions is due to the placement of the tow point and its positioning above the centre of gravity, allowing the angler to impart actions simply by varying retrieve speed. The Athlete 9JM is an extremely versatile lure, a crossover of minnow and metal jig styles. We happily offer the product at cheaper price only with split ring and no hooks to let each angler use preferred hooks. It is useful not only for Salvelinus laucomaenis and Cherry salmon in Hokkaido but also for flounder or blueback.

The FR55 has a very stable swimming action when it is retrieved quickly using it's low center of gravity,

this stability allows it to be used in fast flowing streams and rivers. Its action is a side to side roll and when paused, or on the fall it's holds a natural horizontal position, making it suitable for life like presentations in fast and still waters

Head is made of solid lead, Body is solid resin, This is remarkable structure.

And Genuine sharp 3D actioncan be generated The "Kanade" allows the angler to fish slower sections of water column where the fish like to sit, reaching these slower pockets in faster stream s is now easier with the "Kanade". "Kanade" has the ability to fall easily into pockets of water and the s emi long bib helps the angler hold that position. Its sensitive action through the rod tip is responsive and gives the Kanade a flashing and rolling action mainly due to its trapezoid style body and has the ability to attract fish on the fall and the retrieve. The 45mm is a slow sinking type focusing on the responsiveness and accuracy while 40mm-50mm·60mm are heavy versions for faster water and deeper stream sections.

These days most minnows employ a low center of gravity to create stability.

However the Shizuku 62V was designed for speed, as speed is a k ey to entice the strike. The Shizuku has a strong darting action when twitched and at speed can move through obstructions creating noise and vibration tempting fish to strike. Its weight balance is crucial to its swimmin g action and has been designed to specific specifications to obta in the required action, while being conscious to keep its tight action using its coffin shaped lip. Its body is constructed with flat surfaces, which creates various angles to reflect light and flash when retrieved and with its s lim baitfish profile body it attracts a wide variety of fish species.

Size: 55mm / Weight: 2.5g / Type: Sinking / Hook: #6 / ¥1,250

The Honoka hard bait falls naturally and horizontally and with the slightest of rod actions, the Honoka comes alive with a wide sliding action. This sudden action from still bait to an erratic action will tempt trout from a distance and even initiate a reaction bite from them. By switching between a static fall to a dynamic action

In trout fishing the slow roll retrieve across the bottom is very popular, but bottom fishing can result in getting caught on bottom structure. The Zurubiki Goby has a tungsten ball which is the centre of gravity and is placed outside the body and away from the tow point, it also creates distance between the lure and the bottom when slow retrieving along bottom structures making it much more snag resistant

It has been specifically designed and fitted with barbless hardware to allow anglers to fish more managed catch and release areas that are becoming more popular, and has been very successful in winter fishing in rocky mountain catch and release areas with rainbow trout especially those fish preying on bugs and crusta-

In areas of heavy cover and weedy areas lures are required to have snag-less function,

the Cyarl Blade has legs at each side of a single hook, Its legs help the lure leapfrog the structure. The blades act as an attractant and with a well placed hook the hook up convertion rate is increased. This Cyarl blade is totally innovative lure and considered by many anglers to have "high snag-less function" and "high

Daniel is well known for super long castability and the ability to deal with wide range of retrieve speeds, this time The Daniel has a new size in 7 grams and 14 grams for lake and or wide stream fishing. Additionally, Daniel's advantages are not only the castalibity but also its swimming action that wobble and roll, that is so unique to Daniel. On top of this....Daniel's rear weighted shape is good for high speed falling in deeper water fishing situations. There are a number of Daniel fans in Japan, who have been asking and waiting for this size of Daniel!

TROUT Glow color SALT **BASS** Selected

Front cup blade that generates a strong sonic motion

This buggy spinner is more effective in adverse conditions. When casting with the front cup blade, cast ability is improved by drastically reducing the air resistance, and at the same time, the blade rotates during the fall and appeals to the fish immediately after landing. In addition, it stimulates the motivation of nervous trout by the large rotating wave that can not be imagined from the compact silhouette of the tungsten bead specification. Boasting excellent response even in upstream fishing, moderate drag resistance will help maintain motivation even in situations where the lure is not visible. Of course, the double clench has also been devised to reduce thread twisting.

The slim body shape is not affected in windy and adverse weather conditions and still allows for maximum casting distance and remains stable in flight. The flat sides of the jog and body shape give the lure in moving water and give the lure flash and unique action, that's often missing in slim jigs.

The body is molded with the same lead as the metal jig. Although it is compact, both its casting distance and the simplicity of throwing are sufficient due to low air resistance. In order to ensure that the water flow received by slow retrieve always flows in all directions, it creates enough force to move even under high load conditions with a octopus bait and a bait. By equipping a resin mirror and Mylar sheet, a strong flushing performance is achieved. Furthermore, it has a higher specific gravity than a normal spoon. The torque that is going to move is high and you will not have to wait for the bait to fall. "Guaranteeing the best appeal from the first cast" is the concept of this spoon.

The vibration developed for fish in Mountain torrent, the Middle reach, Lake and wide area. There are three line eye holes which make you able to choose to fit to each situation

ACCESSORIES

Head is made of solid lead, Body is solid resin, This is remarkable structure. And Genuine sharp 3D actioncan be generated when you let it sink to bottom and give it large continuous jerk. Trout reacts as if they are gone crazy which you cannot make them crazy with other lures.

Size: 37mm / Weight: 2.8g / Type: Floating / Hook: #6(single) / \$1,000

A slightly fat, small minnow. It is heavier than it looks, but it can easily be casted by beginners.

For emphasis on response, a fixed weight has been adopted. With a dead slow, it firmly grabs water and swims well. Furthermore, it is excellent in high-speed stability and it can be used for fishing methods that induce reaction bites by fast retrieve. The action is a high pitch wobble roll. You can make a compact silhouette and let fish imagine insects struggling on the surface of the water. If you add a twitch, it floats while kicking back slightly after submerging, so you can explore slowly using a small retrieve distance. A lure that can catch fish slowly and quickly,

3.8g Size: 55mm / Type: Sinking / Hook: #8(single) / ¥1,200 5.3g Size: 55mm / Type: Sinking / Hook: #8(single) / ¥1,200

Retrieving at the bottom style with dart action by short jerk, It performs wide range of situation.

The posture that the tail is floated by buoyancy of body hooks many bites.

Age Sage is a resin based lure that creates a different sonic fr om the traditional metal vibration lure.

There are two weights, 2gm and a 3gm model. This gives the angler the ability to fish various water depths e ffectively. There are two tow points to enable the angler to fish different actions with the rear eye for vibration, and front eye controls movement for a more lifelike appeal. A great feature of the resin body is the abili ty to have translucent colors which incorporates both soft and strong appearances.

Cyarl float works well on when trout aim on surface. Such as dawn and sunrise, feeding time,

Size:35mm / Weight:2.7g / Type:Sinking / Hook:#10(single) / ¥1,050

Designed to be a real worm. Without re-forming silhouette, It has all cast ability, Swimming skill, Falling attitude, These fundamental functions are satisfied.

Top water plug is being popular these days. Not only seeing exciting bite scene but also overwhelming fish result can be expected.

Cyarl Float

"Selected by Jackson" The brand that make anglers feel "I wish I had this"

Rod Egg

S size: ¥560 / Normal: ¥600

Strong tack elastomer material! With multiple uses!

A great item when the joint of the rod is fixed and cannot be removed the elastomer material has high adhesiveness to the rod and there is no loss of power in transmission. In addition, it can be used as a rod belt by using a soft material, unlike general rod belts, the rods do not touch each other, so there is no issues with scratching. In addition, it is a convenient item that can be used for various purposes, such as placing a rod on a dike wall and reducing noise when mounted on a vehicle

| SIZE | Inner diameter | Available rod diameter size |
|-------------|----------------|-----------------------------|
| S size | 6mm | 5~12mm |
| Normal size | 9mm | 7~15mm |

Ideal for fishing and camping!!

A silicone show cover the "Shoopon" that can be fitted quickly and easily to protect your footwear from rain, mud and fish smell, the silicone material and waterproof zip keep your feet and shoes dry and clean.

A versatile silicone case that is convenient for outdoor activities !!

Have you felt stressed that couldn't get fingers off when put a piece of line in bag or pocket? Posh is an item can relieve such stress during fishing. Easy Water clean after using. Since it is a silicon material is kind to the environment and the human body, it can be used not only for garbage storage but also for various purposes such as snacks and pet snacks when taking a walk.

Stylishly store your precious reels !!

Storage of reels is a problem. It's troublesome to leave it on the rod, or put it directly on the floor Since the reel is a delicate tool, even slight scratches and distortions will reduce performance This "reel storage" can be stacked up to 3 levels, so it can be stored safely and securely without taking up space. It is a coveted item for enthusiasts who want to take a leisurely look at the reels

Easier to spool line onto reels !!

"Line revolver" is design specifically to help you put line onto your reel easily and quickly. Just insert the spool according to size, then all you do is wind at a constant speed. Other tools for this job are very costly and don't last, the "Line Revolver" is much better value and so much easier to use

Dåpping Box

Designed exclusively for lure dipping!!

Easy installation, just assemble according to the procedure! It is a special box for lure dipping that can keep your favorite lure clean. It uses thick and strong domestic corrugated cardboard and can be stored compactly after use. * Can be used multiple times depending on usage conditions.

⚠ PRECAUTIONS FOR USE

• Our company shall not be liable for any cracks or deformation of the lure caused by the coating agent. • It is recommended to use about 12 jigs of total length 150 mm or less and up to 60 g. * Please note that the product may lose its strength due to humidity. • Use in a well-ventilated or ventilated area. • This product does not recommend modification of lures

Outdoor Mesh Mask

A mask made of mesh material was developed for easy breathing even outdoors under the scorching sun and does not get stuffy. Since the mask ears are soft, it does not hurt even if you wear it for a long time. It can be washed many times every day and has excellent quick-drying properties.

Tie Dye Beanie

A Tye-Dye beanie that is made of 100% cotton for softness and comfort for all seasons. It has a standard shape and can be worn by both men and women with four colours available so you can wear then according to your mood. Enjoy an outdoor lifestyle with your favourite colours

DWR Half Zipper Hooded Jumper

10,000mm and a moisture permeability of 5,000mm, this garment allows you to enjoy fishing even in the rain. Youtuber R.I Wolf SUU suggests the stress caused by rising tides and water is eliminated by adopting the half zip. The large pocket on the abdomen has easy acess from the left and right and the D Loop on the waist to attach fishing accessories. The sleeves are designed to be a little short so they can be worn without dowels. The DWR fabric has elasticity and we recommend one size up for comfortable

Angler's Warm Gloves

The Body warmer pocket, firstly installed in Jackson Gloves, designed at an angle that makes it easy to insert the body warmer naturally in consideration of the movement of the hand. The pocket has two layers and has a structure that prevents the body warmer from popping out even when casting. The two-finger design allows you to retie lines and perform detailed work without removing gloves. By adopting chloroprene rubber that has a grip from the fingertips to the wrist, the rod can be held firmly, easy to put on and take off, and it is hard to slip when put in the cuffs of the jacket.

Selected ACCESSORIES

Smartphone Pouch

Inner dimensions: about 15mm x 95mm x 165mm

Not only can it be attached to the fishing vest, but can be hung on a bag or pants using a carabiner. In addition, by clear side double pocket specifications, you can still operate the smart phone through the pouch itself.

Lure Pod

The "LURE POD" is a resting pace for lures!

The lure pod has been designed to keep your lures in good condition and also protect yourself and those around you from coming into contact with sharp hooks. Whether in your vehicle, walking to your fishing spot, or in a boat, the lure pod can store a full lure with no parts of the lure protruding and with it being made from hard silicone material it won't catch inside the pod either. The pod is fitted with a resin based carabiner clip so you can clip onto the guide of the rod, as hooks on your guides will damage your rod guides or on your belt or tackle pack when travelling, this way you are fully protected and your lure is safe and ready for when you need to use it. The lure pod metal parts are rust resistant stainless steel so it will have a long life.

Mobile MultiBucket

The mobile multi-bucket allows you to wash your hands for a little while at the fishing spot and keep your fish. The rope attached to the handle is 5meters, so you can draw water properly even at a slightly high fishing spot or embankment. The handle can also be stored compactly inside the bucket, making it easy to carry. It is a convenient item that can be used in any way, such as when you need to wash your hands after touching the fish or when you need a little water.

Appropriate line: PE1~1.5 / Applied reel: SHIMANO #2500~5000 / ¥8,500

In Collaboration with "M.T.C.W", a leading craft maker known for always creating innovative tackle, the "Line roller zero-kai Jackson limited" was born. It is custom item which ensures maximum performance when using PE lines. This is designed only for size No.2500~5000 of SHIMANO's spinning reels, which is for seabass. flat fish and light shore jigging. Suitable for PE 1~1.5 using an angled bush on the line roller. The Zero Kai decreases the wear on the line by putting the line into the roller immediately, and twist and entangling of the line is reduced dramatically at the same time. Therefore it helps to keep the best casting distance and reduced the stress for anglers. Improving the maintenance is one of the special features for this item, it is possible to keep its high rotation performance for a long period just by oiling the bearing which can be done by the angler himself. We proudly introduce "Line roller zero-kai Jackson Limited" with outstanding in quality

[Features]

- 1. Improved smoothness of operation.
- 2. Prevents wearing and extends the life of the PE Line.
- 3. Reduces tangling and line twist 4. Restores line quality for extra distance casting.
- 5. Improved drag performance. 6. Improve the life of the reel and

Installing position

Compatible with all Shimano integrated line rollers.
